Guidelines for Temporary Installation of Aboveground Commercial Tank

Separate plans and permits are required for installation of temporary aboveground commercial tanks as required by the International Fire Code and City of Renton Ordinance.

All required documents must be scanned and saved in PDF format. Contact the City of Renton Permit Center at permittech@rentonwa.gov for instructions regarding how to electronically submit the required documents.

General Requirements: No hard copy paper documents will be accepted. The completed application and all information related to the installation shall be included with the plan review package; incomplete packages will not be accepted. A plan review fee is to be paid at the time the plans are submitted, based on the value of the work to be performed. All contractors doing work in the city of Renton are required to have a Renton Business License. All information and evidence of required licenses are to be provided with the application for permit. If the installation is in conjunction with a building permit, the Building Permit number shall be provided at the time of submittal. The street address assigned by the City of Renton must be included on the application.

All submittals are subject to the following requirements and conditions:

1. Must include a brief, well-written project narrative that describes the entire scope of the project in complete detail, including the length of time for which the tank is intended to be used.
2. Plans must show the proposed location of the tank on the property, including distance and setback from property lines, permanent or temporary structure(s) and other tanks.
3. Specifications of the tank shall include the make, model, capacity, vents, method of mounting, listing on tank and MSDS of the material to be contained or dispensed.
4. Plans shall also include spill control, drainage control, secondary containment and diking.
5. Pump, dispensing hose, nozzles and required safety devices shall be shown on the specification sheets as required.
6. Reviewed plans will either be approved, approved with conditions or denied in accordance with standard plan review procedures.
7. A permit fee will be assessed at the time of permit issuance.
8. The inspector's approval of the installation shall be based on compliance with the approved plans.
9. Product shall not be put into the tank until tank installation inspection has been approved and permit is signed by the inspector.
10. All temporary aboveground tank permits shall have a specific expiration date not to exceed one year. The applicant shall specify the amount of time requested for the temporary tank use at the time the permit is issued. At the time of permit expiration, the tank shall be removed from the temporary location. It will be the responsibility of the permit holder to remove the tank and call for final (project final) inspection of the permitted site.
11. Extension of time beyond a one-year period will require approval by the Fire Marshal. A permit renewal fee shall be based on annual the International Fire Code fee for the storage, handling or use of flammable/combustible or hazardous materials. If an extension of time for use is requested within the first year, no additional fee will be required.
12. Electronic monitoring equipment and cut sheets, to include high level alarm, low level alarm, leak detection, local beacons, audible and/or remote monitoring are all subject to separate plans and permits.

All field tests and/or inspections must be scheduled by calling 425-276-9580 a **minimum of 24 hours** prior to inspection. Inspection appointments will be subject to the availability of personnel. The contractor must be present at the time of all field tests.
